

EPROX

is dedicated to delivering quality pipeline products that provide our customers with confidence in knowing they have a dependable product backed of industry-leading excellence.

Quality

Pipeline Products & Cathodic protection

Our oil and gas pipeline products deliver excellent cathodic protection for any oil or gas pipeline project.

Products:

IsoJoint® Monolithic Isolating Joints

IsoJoint® is a true monolithic isolating joint. The most up-to-date, patented joint on the market, IsoJoint® does not depend on the use of isolating sleeves and washers for bolts nor isolating gaskets or O-rings between flanges.

Kleerband®

Kleerband® Flange Protectors and Kleergel® corrosion inhibitor grease are recommended on all isolated flanges. By encapsulating the flange cavity with the flange protector and injecting our corrosion inhibitor grease, you can rely on your cathodic protection system to provide you with years of trouble free service.

Casing Spacers

Casing Spacers center water and sewer pipes in casings with easy installation, are virtually corrosion proof, and provide insulating protection from a possible electrical shorting between the carrier pipe and casing pipe. No special tools or grease needed, and they are easily bolted on by a single worker.

UBolt-Cote® Pipe Supports

UBolt-Cote® provides corrosion resistance and cathodic protection. All sizes are available. Galvanized long tangent UBolts ranging in sizes through 20" are readily available. Larger sizes and other types of coating such as zinc, cadmium, stainless, Xylan (PTFE) are also available.

Safety Spray Shields

Our plastic cloth shields are manufactured from single and multilayered clear cloth for easy visibility or a colored cloth with a leak indicating patch. Weep holes located behind the sensitive pH indicating patch allow the indicator to immediately signal a leak and change color to red in the presence of an acid or green if an alkali. The pH patch is also replaceable which allows the shield to be reused. APS shields are UV stabilized and resistant to sun, rain, and fumes. They may be used indoors or outdoors. Our cloth shields are quickly and easily installed by one person without any tools by means of a Velcro fastener and drawstrings which are standard.

Radolid® Protection Caps

Radolid® Protection Caps are easily installed by pressing the cap onto the bolted joint by hand. The barbed edge snaps on and prevents the caps from accidental removal. Radolid® Caps are reusable and can be reapplied to 2-3 times. To ensure against corrosion from condensation accumulating in the caps, we recommend brushing nuts with Kleergel® Corrosion Inhibitor Grease.

Inspect-a-Lift® Pipe Support System

The Inspect-a-Lift® system provides the proven solution to crevice corrosion at pipe supports. This type of corrosion is one of the major causes of external corrosion failures on piping systems. Standard pipe supports can cause premature paint failure and are often tough to access for maintenance.

End Seals

While soil stress and pipe movement cause mortar to crack, the APS end seals move with the pipe, ensuring the integrity of the seal. And, unlike link-type sealing blocks that are limited to carrier/casing and can only be used on a concentric profile, the APS end seals are fully flexible.
